REPETITION & N.C. | ENGINEERS | GENERAL | AUTO LATHES | MILLING | TOOLING

Southside Engineering specialises in CNC machining/manufacturing of quality metal components and tools to a vast range of industries throughout Australia including automotive, hardware, structural, defence, security etc.

Southside Engineering have a highly skilled workforce who are dedicated in supplying quality machined components using our substantial inventory of CNC Lathes and Machining Centre's. This technology offers a superior quality supply of highly precision machined components for a one off prototype to a large scale production.

The company endeavors on keeping up with the latest technology and systems to service the broad requirement of quality, service, price and fast turn-around.

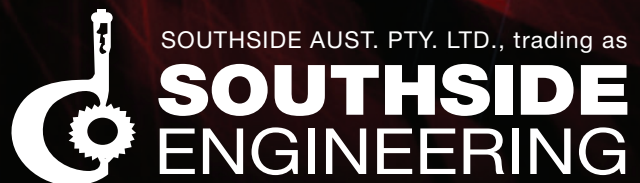

Components can be machined directly from cad information, drawing or a supplied sample. Our qualified design engineers can also assist with design and generate cad drawings.

Southside Engineering has over 45 years experience in servicing some of the largest/most accredited suppliers throughout Australia, which has enabled us to build a solid reputation throughout the industry.
